

## AEROLATTE MILK FROTHER

AUGUST 20, 2008

I am starting to be known for serving a good cappuccino:

good, strong coffee with perfectly foamed milk on top. The coffee comes from [illy](#), and the foam is the quick work of a handy little gadget called the [Aerolatte](#) milk frother (another kitchen tool my mom bought for me)! It's so brilliant that I always assume everyone must own one, but then I'll have a friend come over who's amazed by the foamy milk...

The Aerolatte is small, so it fits perfectly into the utensil drawer. It starts with one simple switch and takes about 2-3 minutes to froth the milk. (I use a [stainless steel container](#) to heat the milk on the stove.) At-home cappuccinos have never been so easy.

Available through Amazon in the [UK](#) or [US](#) .
