

MULTI-POT!

SEPTEMBER 22, 2008

Being 'home' with my mom for the past few weeks, I've

learned a few new tips for the kitchen. Her new number one must-have kitchen utensil? The [Norpro Multi Pot](#) ! This multi-purpose, stainless steel pot can be used for measuring, heating, and pouring. Say you need one cup of melted butter. Or, say you want to heat up some soup quickly and pour it into a bowl without spilling. Or, say you want to heat up some milk to make a cappuccino with your [Aerolatte milk frother](#). Then you seriously must have this Norpro Multi Pot!

The thick, stainless steel tri-ply bottom protects the elements from burning, and allows for perfect heat conduction. The built in measuring table means you can use it to measure out the liquid, and the spout makes for mess-free pouring. Brilliant!
